

Abstract

Object oriented data processing

5 A method and arrangements in a computerised system for control
operations is disclosed. The computerised is adapted for
processing data associated with real world entities based on
objects representing the real world entities. In the method at
least one formal instance is created, the at least one formal
10 instance containing information regarding instantiation of at
least one object. At least one formal instance is associated
with one or more formal instances or groups of formal
instances based on information of the type of said at least
one object or the at least one formal instance.
